

---

Here is the code, any thoughts? Dim objHttp As Object = CreateObject("Microsoft.XMLHTTP") strResponse = "" & strURL & "/files/binkdx9-surface-type-4-download.rar" objHttp.Open "GET", strResponse, False objHttp.Send If objHttp.readyState = 4 Then If objHttp.Status = 200 Then Dim objStream As Object = CreateObject("System.IO.Stream") objStream.Open objHttp.responseBody.SaveTo(objStream) objStream.Close Dim objBytes As Object = objStream.ToString() Dim objExtract As Object = CreateObject("WinRAR.Archive") objExtract.Open(objBytes, ".rar") objExtract.ExtractFiles("./files" & strFileName, objExtract.NewFolderName) objExtract.Extract(objBytes, ".rar", False) objExtract.Close() End If End If A: As HLS correctly says you are missing the newlines for your.txt files in the VBScript. For Each strFile In strFolder strFileName = strFile strFile = Replace(strFile, " ", "") strURL = Replace(strURL, " ", "") f678ea9f9e
